5 In the sky I believe that Africans account for 2-10 percent of the populous
6 They specialize in low IQ indiginous tribes and bringing them up to speed
7 Watch avatar for a movie about low IQ indiginous tribes
8 I have a computer, and my computer is my domestic servant
9 I also have a cat and dog who specialize in mousing and it takes both
10 Cats and dogs have five fingers and hence belong to the five finger club
11 It takes five fingers to use a tablet. I know. I tried.
12 So I figure there are probably Kzin out there
13 My opinion on pigs is that they're in the four finger club
14 I tried to use my tablet with four fingers and failed miserably
15 I like to eat summer sausage and deer jerky
16
17 I like eating steaks
18 I also like overly processed foods like Dr. Pepper which is basically fructos and water
19 I would rather forgo my Dr. Pepper if it meant no steaks
20 Steaks aren't processed very much
21 In particular I like bulgogi because it comes with rice and wilted spinach which I also like
22 As we learn to process our food we end up with bigger brains
23 I'd forgo a bigger brain if it meant I got to eat steaks
24
25 Animals with opposable thumbs include
26 Cats, Dogs, Racoons, Oposums, Pandas, Koalas, Elephants, Kangaroos
27 The size classes where you see race are W, X, Z
28 Popular size classes can be seen at lower sizes
29 Savanna cats remind me of Kzin
30 I think it's popular to be docile and have a collegiate brain size
31 We have excellent agreements on whales, dolphines, rhinos, and elephants
32 At the end of the day we have to eat something
33 Hopefully this expains why my cat keeps kissing me on the mouth
34 Monkeys and dolphines have both passed IQ tests with a retarded score
35 Siamese have a more pronounced opposable thumb
36 I take this to mean that Asians are part cat
37 Then again I've also heard that they're part lizard

69 FMG
70 F is for fluon which are photons, alpha, and beta particles
71 M is for muon which are higgs bosons
72 G is for gluon which are gluons
73 F travels at the speed of light (C) in miles per hour
74 M travels at C^2 as in $E=mc^2$ in m/s
75 G travels at C^4
76 The speed of light can be found by measuring the pyramid of giza
77 F can get you to the nearest star in a year
78 M can get you a tenth of the way across the galaxy in a second
79 G can get you to the farthest observable galaxy in a second
80 In a second is important because it prevents asphyxia
81 We deplane to a lower speed on contact with the atmosphere
82 G's deplane at the van allen belts
83 This can cause asphyxia

84 The van allen belts also deflect objects which can cause asphyxia or a crash
 85 Space ships visiting Earth must be carefully constructed
 86 M can be measured by looking at black holes
 87 I want something that communicates 1e10,000,000,000 miles away with .2 seconds latency
 88 G is opened for some reason
 89 Long haul space communications links are like oceanic cables

 94 14 billion years ago a decision was made to destroy a Y aka $10^{10^{10^{10^{10}}}}$ trade route
 95 Two reasons are as follows
 96 A bunch of thieves and ruffians had set in
 97 They weren't paying their residual payments for tariffs and royalties
 98 An outside interest was interested in a temporary shift of trade route to value and devalue companies
 99 This would allow those knowledge able to turn a profit
 100 14 billion years is longer than the life span of both of these
 101 The trade route has three branches 3, 6, 9
 102 It's a strong trade route and was overdue for a destruction cycle
 103 3, 6, 9 are strong houses
 104 One thing that's a weakness for us is love aka 8
 105 One thing that's a strength for us is money aka 5
 106 The crowns brought in are bigger than Y and omega
 107 Travel on the trade route can take thousands of years and this is worth something
 108 Mineral worth is measured as one planet out of a galaxy on top of crustal rarity
 109 Our astroidal minerals on earth are worth a lot
 110 This includes gold found in Alaska, Appalachians, Transylvania, Switzerland, and London
 111 This amounts to 90% of gold mined
 112 US gold supplies are worth more than 1e20 paychecks per ounce
 113 We have isotopic gold favorable to specific usages
 114 Cern verified this recently
 115
 116 To land on Earth is difficult due to the deflection modifier of the Van Allen belts
 117 To land on Earth pop out of faster than light travel about 1 light hour away
 118 This is tricky as there are no clear delininations at that distance
 119 Instead you must use a proximity sensor
 120 That's why aliens haven't showed up very often
 121 There's a series of books dealing with double belter proof ships
 122 Also there's a rocket that can destroy a planet leaving a solar system intact
 123 It's useful for astroid mining
 124 The deflection modifier is about 10-90 degrees
 125
 126 The pangea and Alaskan asteroids were about 1%-.2% gold
 127 At Mars's air pressure and temperature water evaporates off your lips part of the day
 128 Jupiter has fusion someplaces like under the clouds or at the poles
 129 There has to be a reason for these balances
 130
 131 Our isotopic materials are in the bible in genesis 2, exodus, and revalations 21
 132 They include onyx, gold, molybdenum, chalcedony, milk, honey, aluminum, beryllium, flourine, zirconia, argon
 133 Mars should be limited to 1/10 Earth's magnetism, mass, and gravity
 134
 135 The moon, pangean asteroid were bigger than 30 degrees
 136 Alaskan asteroid, Cuban asteroid, Italian asteroid were at 30 degrees
 137 They were too big to be from the sun's astroid belts
 138 They'd have to be from outside the solar system
 139 I figure if you look at Earth's surface you can find 5-10 without too much trouble
 140 Look at Mars and the moon for more
 141
 142 To build a sub atomic partical camera for gravitons and higgs bosons
 143 1. Buy a Nikon D5
 144 2. Buy a light bucket lens
 145 3.1 Leave the front lens cap on and take closeups
 146 3.2 Get a basalt stone in between two filters
 147 4. Turn out the lights or goto a dark room
 148 5. Mirrors work sort of but don't count on it
 149 6. The view finder shouldn't muddy things

 258 I change the timespan of the from 2000 yrs to 1000 yrs as I have 10 fingers on my hand and 2^{10} is close to $1e3$
 259 If you live 1000 years you deserve to participate a second time
 260 We'll decide the timespan again in 10,000 years as we deserve to experience it more than once
 261 Elders to assist youngsters in some way as my dad helped me
 262 We did 2 E class rounds and we'll probably do 2 I class rounds
 263 Also as long as the other two A's can pony up with geneology for 2000 years we'll skip marriage from here on out
 264 I guess that means that AnL will be able to pick their own E classes next round. So that's $10+2+2$ for Abe.
 265 While we're within the same trigamous trade route within a thousand years we should combine commandments
